

A Brilliant Mind

WE CREATE TECHNOLOGY THAT HELPS RESEARCHERS THINK AND COMMUNICATE CLEARLY.

Most researchers receive little training in scientific writing and spend months producing articles that are difficult to read. As a result, many turn to AI tools, but these often act as ghostwriters, reproducing academic clichés and weakening researchers' authorship. A Brilliant Mind offers a smarter solution: the first AI-supported platform for scientific writing that combines technology, pedagogical, and psychological insight.

At its core is Aby, an AI designed to function as a coach, assistant, mentor, and reviewer. Integrated into an ecosystem of online courses, expert input, and live writing, Aby turns writing from a solitary struggle into a guided, collaborative process. Early tests show that this approach reduces the time to write a scientific paper from several months to just six weeks. Already adopted by five Austrian universities, A Brilliant Mind addresses a large global market of researchers seeking better tools to think and communicate science.
