

CodiGO

BY MAKING HEALTH INFORMATION UNDERSTANDABLE, WE SUPPORT HEALTHIER AND LONGER LIVES.

People are living longer but many of those extra years are spend in poor health, while healthcare systems remain focused on treating diseases rather than preventing them. CodiGO is building a health analytics platform that integrates multiple biological data sources from non-invasive samples to generate insights across key health systems. These health insights can be translated into personalized recommendations for healthier aging, enabling more precise and continuous health monitoring compared to existing one-time testing solutions.
