

Controlis

CONTROLIS DEVELOPS AI POWERED OPERATING SYSTEM FOR ENERGY EFFICIENT INFRASTRUCTURE IN BUILDINGS.

Controlis is pioneering a hardware-agnostic, AI-powered operating system (ControlisOS) that revolutionizes industrial control and HVAC automation by translating engineering specifications directly into operational code ("Spec-to-Code"). This deterministic AI approach eliminates fragmented manual programming and slashes integration times by 70%, while driving massive energy efficiency and continuous predictive maintenance for commercial buildings.

Currently the company is successfully validating its market fit by implementing its first commercial pilots with domain HVAC partners to meet a surging global demand for affordable building energy efficiency control and monitoring systems.
