

Econutri

ECONUTRI DEVELOPED A BIOPROCESS TO PRODUCE SUSTAINABLE PROTEINS FROM CO₂.

Our innovative bio-process was developed to utilize CO₂ and produce sustainable proteins with green Hydrogen as an energy source. Our special microorganisms grow in a highly efficient gas fermentation process and finally form a biomass consisting of up to 80% high quality proteins. These can be processed for various purposes. Applications are animal feed, human food or also cosmetic or technical proteins.
