PREDICTIVE ENERGY MANAGEMENT FOR ENERGY COMMUNITIES

EnergyFamily.at is a web platform to found & manage energy communities fast & easily.

Our goal is to give every household the possibility to become part of an energy community with only a few mouse clicks.

Our USP is the satellite-based predictive photovoltaic energy forecasting technology which optimizes the energy consumption within an energy community and counters the mismatch between production and consumption curves of photovoltaic energy. Private households, municipalities & SMEs can trade electricity with each other, spare net fees, get more independent & save costs. Renewable energy is generated & consumed locally.

Join us: Counter climate change & fight the problem of increased energy prices with EnergyFamily.at!
