

FOAMO

MAKING EVERY STEP MORE SUSTAINABLE

The climate crisis requires sustainable solutions in every part of our daily life to reduce the environmental footprint, mitigate carbon dioxide emissions and curb global warming. In this context, FOAMO will revolutionize the footwear industry by replacement of fossil-based products by sustainable solutions. In contrast to the fossil-based products our solutions are certified biodegradable and can also be fully recycled.

We at FOAMO developed a radical new green technology where 100% of the materials that FOAMO uses are derived from renewable natural resources. Our secret is the use of cellulose, the most abundant renewable material on earth. With it, we create a foam with a porous structure that makes it incredibly lightweight and able to absorb the impact of your foot comfortably.
