

GrowSense

WE AUTOMATE THE GLOBAL FOOD SYSTEM, ENSURING PLANT AND FISH STOCKS ARE CULTIVATED UNDER OPTIMAL CONDITIONS.

GrowSense develops an intelligent platform for Controlled Environment Agriculture, enabling hydroponic, aquaponic, vertical farming and aquaculture systems to be managed more efficiently and reliably. The GrowSense Platform acts as an intelligence layer that connects farm infrastructure, sensors, devices and automation systems, turning operational data into real-time monitoring, early alerts, AI-supported recommendations and farm management workflows.

As a modular add-on, GrowLab will provide automated on-site nutrient and water-quality analysis, creating the data needed for more precise cultivation. GrowSense helps farms reduce manual workload, improve production stability and use water, nutrients, energy and labor more efficiently — supporting a more automated, resource-efficient and resilient food system.
