## metamorphOS

MetamorphOS

THE MISSING LAYER BETWEEN YOUR TEAM, AI AGENTS, AND SAAS TOOLS.

MetamorphOS is a Business Orchestration and Automation platform that unifies humans, AI agents, and automations within a single process engine. Most organizations run on a patchwork of SaaS tools, scattered automations, and manual handoffs. The glue holding it all together? Email ping-pong and shadow spreadsheets that nobody fully trusts but everyone depends on. And now AI agents are adding yet another disconnected layer. MetamorphOS replaces that chaos with real orchestration. It coordinates who does what, when, and how. The platform derives tasks from processes and delegates them to human workers, AI agents, or third-party systems. The result? Swift execution, consistent results, and audit-ready compliance by design. Built for operations teams, process owners, and technical leaders who need visibility and control over complex workflows. Start where you are. Make what you have actually work.
