

MicBioMate

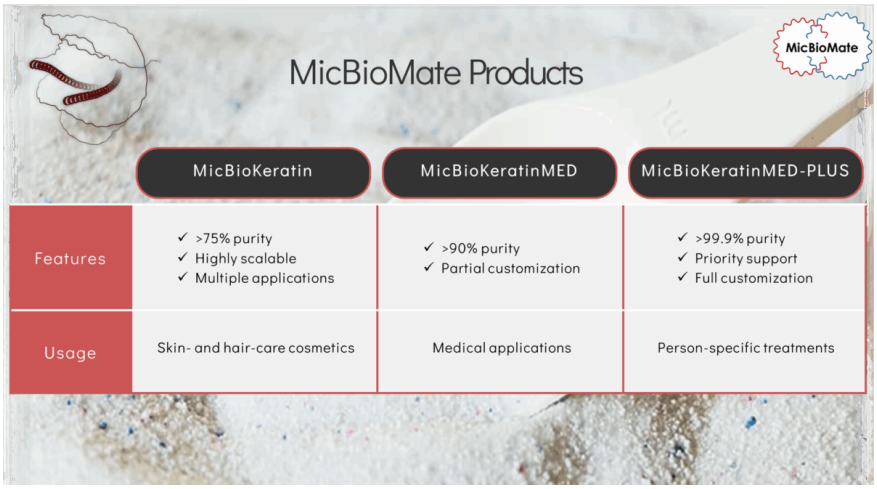

MICBIOMATE IS A STARTUP THAT WILL PRODUCE HIGH-QUALITY THIRD GENERATION KERATINS.

Our core innovation lies in our ability to produce keratins that are entirely independent of animal resources (such as feathers, horns, and claws) and plant sources. This offers a customisable, scalable, and sustainable alternative to traditional methods.

Our mission is to revolutionise the cosmetic and biomedical industries by replacing animal-derived keratin and plant-based analogous proteins with our biotechnologically produced, vegan, and tailored keratins.

Our distinct product lines include:

- MicBioKeratin: Designed for cosmetics, specifically for skin and hair care formulations.
- MicBioKeratinMED: Tailored for medical applications, including but not limited to advanced first-aid bandages and transdermal drug delivery systems.
- MicBioKeratinMED-PLUS: Our specialised platform for developing highly customisable, person-specific treatments, initially focusing on targeted drug delivery.
