

MRsafe

MRSafe IS A DIGITAL PLATFORM REDEFINING MRI SAFETY FOR PATIENTS WITH IMPLANTED MEDICAL DEVICES.

Radiology teams face daily uncertainty when implant compatibility cannot be verified quickly, leading to cancelled scans, delays and safety risks. The MRsafe Platform solves this by bringing verified implant data, MRI system parameters and AI-assisted decision support into one intuitive platform. Instead of searching through PDFs and outdated databases, users identify implants through search or barcode scan and receive structured MRI safety information within seconds. An integrated AI assistant, Mr. Safe, guides professionals through safety checks and supports confident, standardized decisions. Beyond data, the MRsafe Platform is built as a full MRI safety ecosystem. It combines expert knowledge, online learning tools and a professional community.
