

myBIOS

WE ENABLE RAPID DIAGNOSTICS AND VACCINE DEVELOPMENT, BY PROVIDING A SAFE, ECOLOGICAL AND SUSTAINABLE SOURCE OF PROTEINS, USING YEAST CELL FACTORIES.

Our mission is to provide solutions for the recombinant production of natural biomaterials. We focus on the production of protein-based (biological) molecules with unique physical and biochemical properties. We believe proteins are key to some of society's greatest challenges.

We use the yeast *P. pastoris* for protein production. *P. pastoris* combines the simplicity of bacterial expression systems with some essential features of higher eukaryotic hosts.

Due to the current situation, the COVID-19 pandemic, we are focusing on the SARS-COV-2 spike protein (antigen). Our antigens will be used as basis for antibody tests and subsequently also tested as possible vaccine candidates.
