

Norganoid develops the Nano-Lab-on-a-Chip, an advanced organ-on-Chip device specifically designed for discovering and developing drugs to treat neurological DISORDERS.

NORGANOID provides a pioneering organ-on-a-chip platform, enabling accelerated drug screening and development. The state-of-the-art technologies of stem cell research, microfluidics and nanotechnology are combined in the Nano-Lab-On-A-Chip system that helps to drastically reduce time and costs associated with medical and pharmaceutical research.
