# openmaind

WE ORCHESTRATE MOBILE ROBOT FLEETS LIKE GOOGLE MAPS ROUTES TRAFFIC AND UBER MATCHES RIDERS – INTELLIGENTLY ACROSS ANY PLATFORM.

Our platform-independent SaaS solution intelligently coordinates heterogeneous robot fleets across manufacturers, payload types, and use cases – in real time. Just like Google Maps orchestrates urban traffic or Uber manages ride flows, we bring system-wide intelligence to autonomous logistics. No vendor lock-in, no expert knowledge required.

By combining generative AI, graph-based planning, and a digital twin, we turn fragmented robot deployments into a seamless, scalable ecosystem. From scenario planning to live operations, our Orchestrator simplifies complexity, boosts efficiency, and unlocks new automation potential in logistics and manufacturing. openmaind transforms how organizations deploy and operate mobile robots – making automation radically simpler, smarter, and future-proof.
