

PureSurf

PURESURF DEVELOPS AND COMMERCIALIZES INNOVATIVE HIGH-PERFORMANCE, BIO-BASED SURFACTANTS THAT MEET SUSTAINABILITY AND CUSTOMER REQUIREMENTS – WITHOUT COMPROMISE

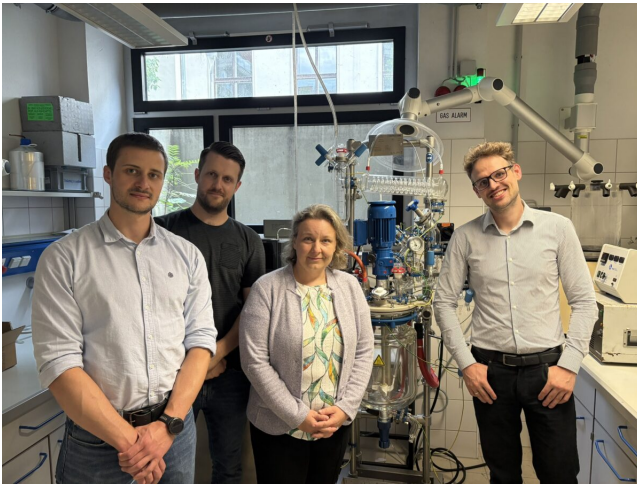

We create and commercialize high-performing, locally sourced bio-based surfactants that significantly outperform established market standards in performance, stability, cost-effectiveness, and environmental, health, and safety impact. Rooted in judicious molecular design, we leverage a feedstock-flexible, highly efficient, modular synthetic platform that perfectly aligns with the principles of green chemistry.

Our product portfolio spans three key horizons: a.) near-market-ready, high-performance surfactants for home care, industrial cleaning, and personal care; b.) additive-free gelators for advanced materials and medicinal applications; and c.) cost-efficient & highly effective biocides.

Our approach strengthens the European circular- and bio-economy, and markedly accelerates the adoption of renewable resources in industrial and consumer markets. True to this mission, PureSurf delivers sustainable

surfactants that combine superior performance with reduced ecotoxicity.
