recordIT

DOCUMENTATION SIMPLE AND EASY

As a team of construction engineers and software engineers recordIT GmbH developed a smart tool specifically for the building industry to support data management, photo documentation and building inspection. This powerful tool generates a well-structured overview of all documents and a clear organized dashboard that is very easy to use.

The basic product can be extended with individual features, depending on the customer's request or the specifications of a project. Due to the in-house experts the added features are implemented in no time. The software solution is not only at the maximum of functionality, it provides comfort and support in the everyday working life.

In addition, recordIT has extended the product family with an industry-independent multi-project management software. This software enables processes as well as reports and forms to be coordinated and managed centrally.
