

RISKSEN

WE IMPLEMENT AN ARTIFICIAL SENSE FOR RISK TO EMPOWER DISRUPTIVE PERFORMANCE OF
SAFE ROBOTS.

The Deep-Tech startup RISKSEN implements AI technology for safe systems, focusing in particular on robotics. Building safe systems is obligatory from an ethical standpoint and is enforced by international standards and laws. However, safety is often seen as a hindrance to innovative functionality and performance due to stringent measures. Our technology addresses this conflict by providing data- and AI-driven solutions that enable robots to anticipate risk as central aspect for performance enabling safety.

Funded by Austria Wirtschaftsservice GmbH (aws), the Federal Ministry Economy, Energy and Tourism - Republic of Austria and the Federal Ministry Innovation, Mobility and Infrastructure - Republic of Austria within the aws Preseed Deep Tech Funding Project number P2508985.
