WE OPTIMIZE YOUR BUSINESS

The MasterScheduler is a software solution to automate and optimize operative scheduling tasks of business processes in transport, production and inventory management.

In operative scheduling, billions of euros are lost every year as companies do not use optimization algorithms to optimize their day by day planning. The MasterScheduler is a plugin into ERP or supply chain management software and optimizes your business with 1-click operative scheduling modules for transport, production and inventory planning. It is the unique tool on the market that integrates all these problems along the supply chain with a clear focus on operative scheduling while being rapidly customizable to existing business processes and delivering robust solutions based on state-of-the-art academic research in robust optimization. MasterScheduler is offered as software & algorithms running in the cloud.
