SilverPlate.ai

WE HELP MACHINE BUILDERS WIN MORE PROJECTS BY TURNING COMPLEX CUSTOMER SPECIFICATIONS INTO FASTER OFFERS WITH LESS RISK.

SilverPlate.ai develops intelligent B2B software for machine and plant engineering companies. Our solution, SpecCheckPro, helps sales teams handle complex customer specification documents faster, with lower effort and reduced risk. Instead of manually reviewing hundreds of pages, coordinating experts across departments and working in fragmented Excel or PDF processes, companies use our platform to automate requirement analysis, collaboration and version comparison. This shortens quotation lead times, lowers sales costs and improves offer quality. At the same time, critical customer requirements are less likely to be overlooked, reducing costly rework and protecting project margins. Our initial focus is the DACH market, where many industrial companies face increasing pressure to process larger and more complex inquiries with limited internal resources.
