skilltree

Skilltree

HELPING COMPANIES DISCOVER, MANAGE AND DEVELOP THE SKILLS OF THEIR EMPLOYEES.

Skilltree is a human resource software for successful skill management. It provides companies a detailed and user-friendly overview of all skills within the organisation, a simple search tool for complex skill profiles, and insights into employee's interests for further development.

By using artificial intelligence, not only teams can be formed meeting needs, but even careers can be dynamically planned. Machine learning helps access unstructured data like CVs and minimize human effort.

Skilltree aims to be the most user friendly and smart skill management tool for companies facing competitive markets and searching for talented people.
