

Space-Lock RD (RotaDamp)

DEVELOPMENT AND QUALIFICATION OF A ROTARY DAMPER FOR SPACE APPLICATIONS.

A competitive rotary damper for space applications is being developed, including qualification according to ECSS.

Several innovative features will enable a product having high technical performance and competitive price, especially for high-volume production runs. Several hardware generations will be built and tested during development. The matured design will be subjected to a full qualification test campaign meeting ECSS requirements.

USP

Highly competitive rotary damper for space applications.

Space connection

The product will be used on board of satellites.
