DISTRIBUTED AUTOMATED MUSHROOM CITY-FARMS.

We bring the city-farming principle to the mushroom growing industry. Our solution is a turnkey full-cycle mushroom city-farm. Our farms are simple and one does not need any special knowledge to run them.

Our farm and innovation consist of 3 items:

1. Our unique substrate machine reduces the human factor in substrate production, substrate contamination and makes the substrate cheaper.
2. Automation of ventilation systems for growing rooms, which keeps the climate precise regardless of the outside conditions, without human involvement.
3. Our Enterprise Resource Planning (ERP) is different, because it forecasts the yield and the sales for 1 year ahead, matches them and predicts how much substrate is needed on a daily basis to achieve the specific yield for specifically planned sales. Therefore, no mushrooms are wasted and they are sold at the highest possible price.
